Analysis prepared by Sel Hardy on Aug 03, 2026 01:22 PM ET, when the stock traded at USD 64.79.

Highlights

- BMJ delivered strong Q2 2026 performance with revenues of \$12.9B [+6% Y/Y], beating consensus by \$1.2B. Growth Portfolio reached \$7.6B [+15% Y/Y], representing 58% of total revenues, driven by Camzyos [\$416M, +60% Y/Y], Breyanzi [\$484M, +41% Y/Y], and Reblozyl [\$735M, +29% Y/Y]. Eliquis surprised with global revenues of \$4.4B [+22% Y/Y], prompting management to raise full-year guidance to 20%-25% growth from 10%-15%. Legacy Portfolio declined to \$5.4B [-4% Y/Y] with Revlimid at \$425M [-49% Y/Y].
- Pipeline strengthened with Iberdomide PDUFA date of August 17, 2026 for multiple myeloma and Mezigdomide NDA accepted with May 13, 2027 PDUFA. BMJ obtained fast-track designation for BMS-986446 in Alzheimer's disease and reported positive Phase 2 Pumitamig data. AI partnerships achieved \$1B cost savings in 2025, targeting \$2B by 2027.
- Based on news sources on August 3, 2026, BMJ and AstraZeneca are reportedly in merger discussions that would create a ~\$400B market cap biopharma giant, though neither company has issued an official statement. The deal faces potential headwinds from antitrust regulatory scrutiny and integration complexity, in our view.

Investment Rationale/Risk

- We maintained Hold rating following Q2 earnings, acknowledging solid Growth Portfolio performance but remaining cautious about legacy product declines pressuring top-line growth. While Eliquis demonstrated resilience, we expect fiercer competition following European patent expiry. Key focus remains pipeline progress, though we anticipate revenue declines over next two years with elevated leverage versus peers due to recent acquisitions.
- Risks include competition for key brands, unfavorable court decisions over patent challenges, slower-than-expected pipeline development, and unfavorable legislation curtailing pricing. Leverage remains elevated due to Karuna and RayzeBio acquisitions. Generic competition for Revlimid and Pomalyst poses ongoing revenue headwinds.
- Our target is \$65, 10.5x our 2027 EPS estimate, a discount to BMJ's 10-year historical forward P/E average of 12.0x. We lifted 2026 EPS estimate to \$6.75 from \$6.30 reflecting Q2 beat. The innovative pipeline presents significant growth opportunities if late-stage trials prove successful.

Analyst's Risk Assessment

LOW	MEDIUM	HIGH
-----	--------	------

BMJ's revenues face risks from competing brand-name drugs as well as generic and biosimilar makers that challenge brand patents in an effort to market lower cost copycat versions. Additionally, future revenue forecasts for R&D pipeline drugs face the uncertainty of expensive clinical trials and FDA regulatory hurdles.

Bristol-Myers Squibb Company

Business Summary Aug 03, 2026

Corporate Overview. BMJ is a global biopharmaceutical company offering a broad range of conventional prescription drugs and advanced biologic treatments. Its development efforts focus on the therapeutic areas of oncology (solid tumors and blood cancers), immunology and inflammatory diseases, and cardiovascular and fibrotic disease.

BMJ sales are fairly concentrated, with its top-three products (Revlimid, Eliquis, and Opdivo) comprising 57% of total revenues in the 12 months ended December 31, 2025 (2023: 55%). This increases BMJ’s risk profile, in our view, especially compared with larger competitors like Pfizer or Johnson & Johnson, whose top-selling brands usually generate 10% or less of total sales. Drug concentration increases the risk of unexpected adverse events involving primary brands materially impacting equity value. These events can include early loss of exclusivity on brands due to successful patent challenges from generics, or negative clinical trial results on expanded treatment indications that negatively impact a drug’s sales forecasts. Below is a synopsis of BMJ’s top-selling drugs.

Revlimid. First approved in 2005, Revlimid is a capsule form drug used to treat cancers of the blood and lymph nodes, primarily multiple myeloma. The drug entered BMJ’s portfolio through the 2019 acquisition of Celgene. In 2021 [its last year before the onset of generic competition], it had revenues of \$12.8B, making it BMJ’s leading drug at 28% of total revenue. Revlimid patents began expiring in 2022, and it now begins to face settlement-limited generic competition, with unrestricted competition forecast to start in 2026. In Q2 2022, Revlimid sales fell sharply 22% Y/Y. Revlimid generated worldwide sales of \$3B, down 49% Y/Y in 2025.

Eliquis. First approved in 2012 by the FDA, this cardiovascular anticoagulant drug has approved indications for blood clots and reducing the risk of stroke. Eliquis generated 2025 revenues of \$14.5B [+8% Y/Y, 30% of BMJ’s 2025 total sales]. We think Eliquis still has a solid growth trajectory and will keep its exclusivity until patent expiration in 2027 despite myriad generic challenges.

Opdivo. Approved in March 2015, Opdivo [\$10B in 2025 sales, +8% Y/Y, and 21% of total sales] is an infused biologic immuno-oncology (IO) treatment that induces the immune system to attack cancerous tumors. It is approved for several indications, including first-line melanoma and renal cell carcinoma (RCC, kidney), and second-line (secondary treatment after a first one failed) treatments for non-small cell lung cancer (NSCLC) and hepatocellular carcinoma (liver). Opdivo has recently seen sales growth slow due to competition from competitive immuno-oncology drugs, especially Merck’s Keytruda.

BMJ has long held a goal to expand Opdivo indications into more first-line treatments, especially those with large patient populations like NSCLC, where global annual sales eclipse \$22B. Opdivo already generates substantial second-line revenues in NSCLC, but its growth slowed in 2019 as the success of Ketyruda in first-line NSCLS began to limit the eligible population for second-line IO treatments. In May 2020, the FDA approved Opdivo + Yervoy as a first-line treatment for certain patients with metastatic NSCLC. In our view, this substantially improved BMJ’s NSCLC’s market share and put Opdivo back on a better growth trajectory.

Celgene Acquisition. In late 2019, BMJ acquired the former Celgene for \$74B. The deal combined two firms with overlap in the oncology, immunology, and inflammation therapeutic areas. Celgene’s crown jewel was Revlimid, which currently faces sales declines due to its recent loss of exclusivity in 2022.

Key Developments. BMJ completed the large \$12.7B acquisition of Karuna Therapeutics in March 2024, which has a focus on neurological conditions. We think this transaction has been positive for BMJ, as it may counterbalance lackluster growth prospects and patent expirations in the next several years. Cobenfy, which came with the Karuna acquisition, was approved in the U.S. for the treatment of schizophrenia in adults in Q3 2024. This approval represents BMJ’s re-entry into the neuroscience field and introduces a new pharmacological approach to treat schizophrenia – the first in decades. In September 2025, BMJ announced that it is planning the UK launch of Cobenfy, matching the U.S. price of around \$22.5K a year.

Drug Pricing Negotiations. BMJ’s key blood thinner, Eliquis, was on the list first list of 10 top-selling prescription drugs subject to negotiations with Medicare. In August 2024, the CMS announced the results of the initial drug pricing negotiations, but the announced prices will not take into effect until January 2026. For Eliquis, the discount of negotiated price from 2023 list price is at 56%, which will bring down the 30-day supply of the drug in 2026 to \$231. In January 2025, BMJ’s multiple myeloma drug Pomalyst was selected as one of the 15 drugs for the second round of drug pricing negotiations. Pomalyst’s U.S. sales in 2024 were at \$2.7B, making up 6% of BMJ’s total revenue. With negotiated prices set to take effect in 2027 and with our expectations for Pomalyst sales making up a lower portion of the company’s total sales, we think the IRA’s revenue impact should be manageable, especially vs. peers such as Novo and GSK.

Financial Trends. We think 2025 has been a transformation year for the company, in which we saw significant progress to accelerate revenue growth and deliver on cost saving initiatives during the year. While the Legacy Portfolio’s revenue performance reflected the expected but accelerating impact of generic competition with sales \$25.7B for full-year 2025, down 25% Y/Y. We think that this was successfully counterbalanced by the solid momentum in the Growth Portfolio sales [\$26.4B, +17% Y/Y] and a strengthened balance sheet. Cost savings around \$1B achieved in 2025 via the use of AI, were substantial and we think BMJ will continue to expand its cost program to lower operating expenditure and reach its \$2B goal by year-end 2027.

Bristol-Myers Squibb Company

Sub-Industry Outlook

Our 12-month outlook for the pharmaceuticals sub-industry is neutral. We see several long-term tailwinds fueling the sub-industry's growth, such as continued innovation to discover and develop breakthrough therapies, an aging population, and rising life expectancy driving strong demand for drugs and treatments, balanced by a number of near-term risks such as loss of exclusivities and intensifying competition. While we continue to see policy risks in the near term, we believe the worst-case scenarios are unlikely to happen after major pharmaceutical companies reached agreements with the U.S. government on tariffs.

Q2 earnings for pharmaceuticals were expected to fall by more than 30% Y/Y, largely due to base effects and one-off IPRD charges related to M&A, but actual results tracked better than feared, with a number of companies beating earnings estimates.

Yet, multiple blockbuster drugs face loss of exclusivity (LOE) through 2030, with generic and biosimilar competition accelerating. Several blockbuster drugs face LOEs in 2026, such as Pomalyst by BMY; Opsumit and Simponi by JNJ; and Januvia/Janumet by MRK. Pfizer faces approximately \$14B to \$15B in LOE impact through 2028 on its major products. We think patent cliff concerns have been guiding companies' strategic moves as firms have been aggressively pursuing M&A to replenish their drug portfolios in recent years.

Amid tensions in the Middle East and tariff concerns, pharmaceuticals remain a defensive sector, in our view. We think the demand for essential drugs, particularly in the fields of oncology, immunology, diabetes, and mental health, will remain strong. While we expect oncology to retain its dominant market share in terms of global spending in the next few years, we expect obesity to continue its strong growth trajectory and be the fastest growing therapy area.

Obesity treatment represents one of the most compelling growth opportunities in biopharma today, accelerated by breakthrough GLP-1 therapies and increasing obesity rates. In the near

term, we see the duopoly between Eli Lilly and Novo Nordisk continuing, while we expect competition between the two to intensify this year.

The Inflation Reduction Act (IRA) allows Medicare to negotiate prices for the costliest drugs covered in Parts B and D. The first drug pricing negotiations for the 10 top-selling prescription drugs in 2024 included products from large U.S. pharmaceuticals (BMY, PFE, LLY, MRK, and JNJ) with discounts ranging from 38% to 79%. In 2025, the next 15 drugs subject to negotiations included drugs from U.S. firms such as BMY, PFE, and MRK with discounts ranging from 38% to 85%. 2026 marks the first year in which the first round of negotiated prices take effect, representing a structural shift in U.S. drug pricing. We think the IRA may have important implications; if firms know new blockbusters may get negotiated down, they may price them higher at launch. The act may also impact where and how firms decide to invest.

AI has the potential to transform the sub-industry, reducing costs and improving savings in the long run, in our view. The use of AI is accelerating drug development, optimizing manufacturing, and personalizing treatments. We think the use of AI could result in increased productivity, creating favorable margin evolution.

As of August 28, 2026, the S&P Composite 1500 Pharmaceuticals Index (+18.9% YTD) outperformed the S&P Composite 1500 Health Care Index (+11.2% YTD) and S&P Composite 1500 (+12.9% YTD).

*For Peer Groups with more than 10 companies or stocks, selection of issues is based on market capitalization.
 NA-Not Available; NM-Not Meaningful.
 Note: Peers are selected based on Global Industry Classification Standards and market capitalization. The peer group list includes companies with similar characteristics, but may not include all the companies within the same industry and/or that engage in the same line of business.

Bristol-Myers Squibb Company**Analyst Research Notes and other Company News****August 03, 2026**

01:22 PM ET... BMJ Shares See Limited Impact After Rumors Regarding Potential Merger with AZN [BMJ 64.79***]:

Based on various news sources, Bristol-Myers Squibb and AstraZeneca are said to be in talks to merge, potentially creating a mega-biopharma company. While no official statement came from either company, the news sources reported that discussions have been ongoing for the past several months. Based on our calculations, the combined entity would carry a pro-forma market capitalization of approximately \$400B, with BMJ at approximately \$133B and AstraZeneca contributing roughly \$264B at current market valuations. So far BMJ shares have seen limited impact from the news, with shares up nearly 2% after the news broke and down nearly 1% at mid-day, while shares of AZN are down close to 8%. In our view, the mega-merger closing may face regulatory hurdles due to anti-trust concerns, while we see integration risks if the deal were to go through due to the complexity of integrating two of the largest global pharmaceutical companies. We keep our target at \$65, 10.5x our 2027 EPS view of \$6.18. We keep our 2026 EPS estimate at \$6.75. / Sel Hardy

July 30, 2026

01:15 PM ET... CFRA Retains Hold Rating on Shares of Bristol-Myers Squibb Company [BMJ 63.48***]:

We raise our target price to \$65 from \$60, 10.5x our 2027 EPS estimate, a discount to BMJ's 10-year historical forward P/E average. We lift our 2026 EPS estimate to \$6.75 from \$6.30. We maintain our 2027 EPS forecast at \$6.18. BMJ reported a solid second quarter performance, beating consensus estimates for both EPS and revenue. The company showcased robust performance from its "growth portfolio," which now constitutes nearly 60% of total revenue and is effectively offsetting declines in its legacy products facing generic competition. Key growth drivers like Reblozyl, Breyanzi, Camzyos, and Opdualag all posted double-digit growth. The legacy portfolio, excluding the strong performance of Eliquis, saw revenues decline due to generic entry for products like Revlimid, which we expect to continue. Based on the first-half momentum, BMJ raised its full-year 2026 guidance for both revenue and adjusted EPS. However, timelines for key readouts for Milvexian and the Cobenfy ADEPT program were pushed into 2027. / Sel Hardy

July 30, 2026

08:29 AM ET... BMJ Posts Strong Q2, Raises Full-Year Guidance on Growth Portfolio Momentum [BMJ 63.60***]:

BMJ delivered strong Q2 2026 results with revenues of \$12.9B [+6% Y/Y], \$1.2B above consensus, and non-GAAP EPS of \$2.04 [+40% Y/Y], \$0.44 above the consensus expectation, accelerating from Q1's \$1.58. The quarter was defined by continued Growth Portfolio momentum and notably positive Eliquis performance, which grew 22% Y/Y to \$4.4B, despite European patent expiry concerns. The company raised 2026 revenue guidance to \$49.0B-\$50.0B from \$46.0B-\$47.5B and lifted non-GAAP EPS to \$6.75-\$7.00 from \$6.05-\$6.35, reflecting broad-based strength. The Growth Portfolio reached \$7.6B [+15% Y/Y], now 58% of total revenues, with standout performances from Camzyos (\$416M, +60% Y/Y) and Breyanzi (\$484M, +41% Y/Y). We view the pipeline outlook as strengthened with several near-term catalysts, including Iberdomide's August 17 PDUFA date and Mezigdomide's May 2027 PDUFA target. We believe the better-than-expected Eliquis resilience and Growth Portfolio acceleration position BMJ well for sustained momentum. / Sel Hardy

May 28, 2026

02:34 PM ET... CFRA Lowers Rating on Shares of Bristol-Myers Squibb Company to Hold from Buy [BMJ 56.79***]:

We lower our target price to \$60 from \$73, 9.7x our 2027 EPS estimate, a discount to BMJ's 10-year historical forward P/E average. We keep our 2026 EPS estimate at \$6.30 and our 2027 EPS forecast at \$6.18. While we think the company has been successfully navigating a period of important transition with solid performance from its growth portfolio, we think declines in the legacy products could put pressure on top-line growth in the next quarters. While key drug Eliquis (anticoagulant) performed better than anticipated in Q1, demonstrating resilience with revenues of \$4.1B, we think competition will get fiercer with generic entry as the European patent expired on May 19. We think going forward, the key focus for BMJ will be pipeline progress and the evolution of sales from new drugs. However, we see top-line revenue declines in the next two years while leverage remains more elevated versus peers due to recent acquisitions. Shares of BMJ rose by nearly 19% since we

gave our Buy rating on September 30. / Sel Hardy

May 01, 2026

02:33 PM ET... CFRA Keeps Buy Rating on Shares of Bristol-Myers Squibb Company [BMJ 58.49***]:

We raise our target price to \$73 from \$69, 11.7x our 2027 EPS estimate, a discount to BMJ's 10-year historical forward P/E average. We lift our 2026 EPS estimate to \$6.30 from \$6.22 and maintain our 2027 EPS forecast at \$6.18. BMJ announced Q1 revenues of \$11.5B, a 1% Y/Y increase, and non-GAAP EPS of \$1.58, above expectations. The company's growth portfolio, which includes key products such as Reblozyl, Breyanzi, Opdualag, Qvantig, and Cobenfy, and is a key area of focus, saw a 9% Y/Y increase in sales, driven by strong demand for BMJ's newer medicines. The quarter was also marked by significant progress in the company's pipeline, with positive data for its CELMoD program and advancements in several late-stage assets. We think the company is successfully navigating a period of important transition, with strong performance from its growth portfolio offsetting declines in legacy products, as we anticipate a series of crucial clinical trial readouts later in the year. / Sel Hardy

April 30, 2026

08:01 AM ET... BMJ Reports Strong Q1 Results Fueled by Growth Portfolio, Reaffirms Guidance [BMJ 58.26***]:

BMJ delivered solid Q1 2026 results with revenues of \$11.5B [+3% Y/Y], \$580M above the consensus. Meanwhile, non-GAAP EPS of \$1.58 declined 12% Y/Y but beat the consensus by \$0.16. Growth Portfolio demonstrated exceptional strength with 12% Y/Y expansion to \$6.2B, now representing the majority of total sales versus the Legacy Portfolio at \$5.3B [-6% Y/Y]. We think the company's diversification strategy is showing clear progress, with standout performances from Camzyos (\$314M, +97% Y/Y), Breyanzi (\$411M, +56% Y/Y), and continued Eliquis resilience (\$4.1B, +16% Y/Y). Management reaffirmed 2026 revenue guidance of \$46.0B-\$47.5B and non-GAAP EPS guidance of \$6.05-\$6.35, with performance trending toward upper end of range. We believe the Growth Portfolio momentum positions BMJ well for future growth despite Legacy Portfolio headwinds from generic competition, particularly after Revlimid's sharp decline to \$349M [-63% Y/Y]. / Sel Hardy

February 05, 2026

05:14 PM ET... CFRA Retains Buy Rating on Shares of Bristol-Myers Squibb Company [BMJ 59.52***]:

We raise our target price to \$69 from \$63, 11.2x our 2027 EPS estimate, a discount to BMJ's 10-year historical forward P/E average. We maintain our 2026 EPS estimate at \$6.22 and start our 2027 EPS forecast at \$6.18. After posting better-than-expected Q4 results and the analyst call this morning, we remain bullish on BMJ. We think 2025 has been a transformation year for the company, in which we saw significant progress to accelerate growth and deliver on cost saving initiatives during the year. While the Legacy Portfolio's revenue performance reflected the expected but accelerating impact of generic competition with sales \$25.7B for full-year 2025, down 25% Y/Y, we think that this was successfully counterbalanced by the solid momentum in the Growth Portfolio sales (\$26.4B, +17% Y/Y) and a strengthened balance sheet. Cost savings around \$1B achieved in 2025 via the use of AI were substantial, and we think BMJ will continue to expand its cost program to lower opex and reach its \$2B goal by 2027 year-end. / Sel Hardy

Bristol-Myers Squibb Company

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs [American Depositary Receipts], and ADSs [American Depositary Shares] based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS [Stock Appreciation Ranking System], equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark [e.g., a regional index [MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index]], based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

[also known as **S&P Capital IQ Earnings & Dividend Rankings**] - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A	Above	C	Lowest
B+	Average	D	In Reorganization
NC	Not Ranked		

EPS Estimates

CFRA's earnings per share [EPS] estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus [average] EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Abbreviations Used in Equity Research Reports

- CAGR - Compound Annual Growth Rate
- CAPEX - Capital Expenditures
- CY - Calendar Year
- DCF - Discounted Cash Flow
- DDM - Dividend Discount Model
- EBIT - Earnings Before Interest and Taxes
- EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
- EPS - Earnings Per Share
- EV - Enterprise Value
- FCF - Free Cash Flow
- FFO - Funds From Operations
- FY - Fiscal Year
- P/E - Price/Earnings
- P/NAV - Price to Net Asset Value
- PEG Ratio - P/E-to-Growth Ratio
- PV - Present Value
- R&D - Research & Development
- ROCE - Return on Capital Employed
- ROE Return on Equity
- ROI - Return on Investment
- ROIC - Return on Invested Capital
- ROA - Return on Assets
- SG&A - Selling, General & Administrative Expenses
- SOTP - Sum-of-The-Parts
- WACC - Weighted Average Cost of Capital

Dividends on American Depositary Receipts (ADRs) and American Depositary Shares (ADSs) are net of taxes [paid in the country of origin].

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ 5-STARS (Strong Buy):

Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★★ 4-STARS (Buy):

Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 3-STARS (Hold):

Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★★★★ 2-STARS (Sell):

Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 1-STAR (Strong Sell):

Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

Bristol-Myers Squibb Company

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five (six) model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports [collectively, the "Research Reports"] reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.
