Analysis prepared by **Angelo Zino, CFA** on Sep 03, 2026 11:45 AM ET, when the stock traded at **USD 225.89**.

Highlights

- ▶ We see sales growing 90% in FY 27 and 70% in FY 28 after Jul-Q revenue of \$96.2B (+100% Y/Y). NVDA is transitioning to a full-stack AI infrastructure provider, with Data Center reaching \$89B. Customer diversification accelerates as ACIE [AI Clouds, Industrial & Enterprise] grew 25% sequentially versus Hyperscale's 13%, expected to represent half of Data Center revenue going forward. Vera Rubin commenced production with orders from every major hyperscaler, expected to represent 20% of Data Center revenue in Oct-Q. Revenue opportunity per gigawatt scaled from ~\$18B with Hopper to ~\$40B with Vera Rubin.
- ▶ Gross margins compress from 75% in Jul-Q to a 71%-72% trough by early CY 27, stabilizing at 72%-73% once memory supplier price increases take effect. The pressure reflects extreme HBM pricing driven by AI buildout itself, viewed as manageable given NVDA's deep supplier relationships.
- ▶ NVDA returned record \$26B in Jul-Q (\$20B buybacks, \$6B dividend), representing 60% of FCF above its 50% target. Oct-Q guidance of \$108B exceeded consensus of ~\$104B. We keep FY 27 EPS at \$9.23, FY 28 at \$15.69, and FY 29 at \$17.76.

Investment Rationale/Risk

- ▶ Our Strong Buy reflects NVDA's expanding TAM as a full-stack AI provider. Vera Rubin delivers 30x higher throughput per megawatt and 35x lower token costs versus Grace Blackwell Ultra, with CPU revenue expected to more than double in FY 28. NVDA's platform runs every major AI model with fungibility across workloads and deployments. Agentic AI requires 15x-100x more compute per user, while physical AI and sovereign AI represent major opportunities. The \$13B Hugging Face acquisition provides ecosystem control.
- ▶ Risks include memory cost inflation creating margin pressure that could persist. Geopolitical tensions with China remain a concern as competitors make progress while NVDA cannot compete freely. Customer concentration and ~\$50B frontier AI lab commitments raise circular financing concerns. Execution risk around Rubin Ultra in 2H CY 27 remains elevated.
- ▶ Our \$270 target is 15x our CY 28 EPS of \$17.76, below peers and historical averages to reflect growth prospects offset by AI spending sustainability concerns. This compares to NVDA's historical forward average of 37x.

Analyst's Risk Assessment

LOW	MEDIUM	HIGH
-----	--------	------

Our risk assessment reflects elevated exposure to a select few hyperscalers that could sharply curtail spending at any point, the high cyclicality of the gaming industry, and the need to maintain an adequate amount of R&D spending to keep up with product cycles and hold market share.

Business Summary Sep 03, 2026

Corporate Overview. NVIDIA Corporation [NVDA], which invented the graphics processing unit [GPU] in 1999, makes products for data centers, high-performance computing, and mobile computing markets.

In May 2026, NVDA announced that it has transitioned its earnings reporting into two primary market segments to better reflect its transformation from a chip manufacturer into a full-stack AI infrastructure powerhouse. The first, Data Center [91% of FY 26 [Jan.] revenue], is the massive driver of NVDA's revenue, housing its market-leading AI accelerators, GPUs, and custom silicon. It is subdivided into two categories, Hyperscale [technologies and infrastructure for major cloud service providers and massive AI models] and ACIE [solutions targeted at AI clouds, industrial, and enterprise markets]. Hyperscale made up 54% of Data Center revenue in FY 26 while ACIE was the other 46%. Edge Computing [9% of FY 26 sales] encompasses devices designed for agentic and physical AI. It includes hardware, software, and systems for personal computers, video game consoles, robotics, and automotive/autonomous driving platforms.

Previously, NVDA's platforms addressed four large markets where its expertise is critical: Data Center [90% of revenue in FY 26], Gaming [7%], Professional Visualization [1%], and Automotive [1%]. OEM and Other represented the remaining percentage of revenue.

The NVIDIA Data Center platform is focused on accelerating the most compute-intensive workloads, such as AI, data analytics, graphics, and scientific computing, delivering better performance and power efficiency relative to conventional CPU-only approaches. It is deployed in cloud, hyperscale, on-premises, and edge data centers. The platform consists of compute and networking offerings typically delivered to customers as systems, subsystems, or modules, along with software and services. Compute offerings include supercomputing platforms and servers, bringing together GPUs, DPUs, interconnects, and fully optimized AI and high-performance computing [HPC] software stacks. In addition, these include NVIDIA AI Enterprise software; its DGX Cloud service; and a growing body of acceleration libraries, APIs, SDKs, and domain-specific application frameworks. Networking offerings include end-to-end platforms for InfiniBand and Ethernet, consisting of network adapters, cables, DPUs, and switch systems, as well as a full software stack.

NVDA's gaming platforms leverage its GPUs and software to enhance the gaming experience with smoother, higher-quality graphics. NVIDIA RTX brings next-generation graphics and AI to games that feature ray tracing technology for real-time, cinematic-quality rendering. Ray tracing, long used for special effects in the movie industry, is a computationally intensive technique that simulates the physical behavior of light to achieve greater realism in computer-generated scenes. NVDA's automotive exposure comprises cockpit infotainment solutions, AV platforms, and associated development agreements.

Corporate Strategy. We believe that NVDA's massive software moat will help the company sustain its premium pricing. The next wave of AI is AI agents across the enterprise space and robotics. Enterprise AI is already in full motion, with more than 5M developers leveraging its software [NVIDIA AI Enterprise], which includes NVIDIA NeMo and NIM Microservices, as the operating platform of agentic AI. Industry leaders are using NVIDIA AI to build Copilots and agents. Working with NVDA, SaaS providers like Salesforce [via Agentforce], SAP, and ServiceNow are accelerating the development of these applications. Although software revenue is less than 5% of total sales, its business model resembles Apple's in that the value of the software is priced into the device itself [e.g., NVDA's CUDA software embedded in the GPU price, while iOS is free but priced into AAPL's device revenue].

Impact of Major Developments. On December 24, 2025, NVDA agreed to acquire AI chip designer Groq's technology assets and key talent for \$20B through a strategic acqui-hire and licensing deal, allowing Groq to remain independent. The transaction secures Groq's inference-optimized Language Processing Units [LPUs], which Groq claims deliver 3x-5x faster performance than standard GPUs for real-time AI applications. We view this as strategically smart, eliminating a competitive threat while securing elite talent, including Groq founder Jonathan Ross, who helped architect Google's TPU technology. We believe this deal significantly strengthens NVDA's position in the high-growth inference market and supports its AI factory architecture expansion, leveraging Groq's low-latency capabilities for real-time workloads. We view LPUs as complementary to GPUs across the AI ecosystem, noting Groq's on-chip SRAM [Static Random Access Memory] architecture design is not limited by high-bandwidth memory [HBM] supply constraints.

In September 2025, NVDA announced a \$5B investment stake in Intel Corporation [INTC 88 ****], purchased at \$23.28, as well as greater collaboration whereby the two will develop data center and PC products together. On the data center front, NVLink will integrate NVDA's Arm-based GPUs and INTC's x86 ecosystem. On the PC side, INTC will integrate NVDA's RTX GPUs with its x86 CPUs. We think the investment puts NVDA further in the good graces of the U.S. government administration.

Financial Trends. We view NVDA as appealing for long-term investors given the potential tied to AI/data centers. We think investors need to be forward-looking for a high-growth company like NVDA, but we note the volatility of earnings given the cyclical nature of the industry. Company-specific issues that can impact results include product cycles and technology.

NVDA completed a 10-to-1 forward stock split, effective after the close on June 7, 2024, and hiked its annual dividend to \$0.04 per share from \$0.01 in late May 2024.

NVIDIA Corporation

Sub-Industry Outlook

We have a positive fundamental outlook for the Semiconductors sub-industry over the next 12 months. We expect semiconductor sales to rise more than 55% in 2026 and at an additional pace of over 20% in 2027, after a 22% boost in 2025 and a 21% increase in 2024. We think revenue growth in the next 12 months, from a component perspective, should benefit from higher capital spending on greater compute, networking, and memory tools for GenAI capabilities among the major cloud providers.

For 2026, we see the greatest variability to our growth expectations coming from the memory side, which remains extremely supply-constrained and will likely remain so well through 2027 (and is heavily driving our 2026 growth forecast with revenue now seen at over \$1.2T). Spot memory prices have grown sharply in recent quarters and are likely to remain stubbornly high well through 2027, while supply constraints and energy bottlenecks pose downside risks to both AI server installations and end-markets like PCs (where we expect vendors to raise prices to offset higher component costs, hurting end-demand). Demand for AI workloads remains unrelentingly strong, leading to incredible profitability for the industry, while more mature/cyclical PC/smartphone orders are likely to be negatively impacted by the memory constraints.

Customer capex expectations have risen, with visibility improving for 2026, as we see capex growth of at least 90% (up from 30% at the start of the year). We project data center capital spending rose more than 45% in 2025 after a growth pace of over 40% in 2024. We estimate both Meta’s and Alphabet’s spending will nearly double in 2026, while Microsoft looks to accelerate capex spending as well. The four major hyperscalers have virtually doubled capex spending in the last two years. We also note that the Stargate Project venture provides upside, especially tied to potential Sovereign AI deals (e.g., Saudi Arabia).

The magnitude of the analog recovery looks to be gaining steam after a downward slope for nearly

three years. We currently forecast the recovery to see improving orders through 2027, benefiting from healthy fundamentals across cyclical markets and improving power management content across the data center space. As a reminder, we do not think the auto industry needs to see significant growth for this thesis to play out given the ongoing shift toward higher semiconductor content in vehicles (e.g., we note this is taking place at a faster pace in China than in Western markets).

We believe the semiconductor industry is in the midst of a decade-long supercycle as content growth per device across a host of markets accelerates, due to the emergence of greater AI capabilities.

While companies that outsource manufacturing typically have more stability in gross margins, others with their own manufacturing see more variability. Industry margins are a function of manufacturing utilization and inventory supply-demand imbalances. We forecast some companies, especially in analog, will maintain higher inventories. Healthy free cash flow and high cash levels will likely result in greater shareholder returns via share repurchases. Regulatory and geopolitical uncertainties are risks.

Year-to-date through July 3, 2026, the S&P Semiconductors sub-industry rose 28.0% versus a 9.9% rise for the S&P 1500. In 2025, the sub-industry rose 42.9%, above the 15.5% increase for the S&P 1500.

*For Peer Groups with more than 10 companies or stocks, selection of issues is based on market capitalization.
 NA-Not Available; NM-Not Meaningful.
 Note: Peers are selected based on Global Industry Classification Standards and market capitalization. The peer group list includes companies with similar characteristics, but may not include all the companies within the same industry and/or that engage in the same line of business.

NVIDIA Corporation

Analyst Research Notes and other Company News

September 03, 2026

11:45 AM ET... CFRA Maintains Strong Buy on NVIDIA — Implications of Hugging Face Deal [NVDA 225.89*****]:

NVDA says it plans to acquire Hugging Face — the dominant open-source AI platform with 18M+ users and 3M+ models — for \$13B, representing a strategic move up the AI stack. Jensen Huang confirmed Hugging Face will remain platform-neutral post-close, with NVIDIA compute not required, preserving developer trust while positioning NVIDIA to benefit from ecosystem-level traffic intelligence and cloud re-entry via Hugging Face's existing inference marketplace. The deal isn't intended to bolster NVDA's financials in the near term but rather reflects NVIDIA paying for ecosystem control, and we maintain our Strong Buy rating with a \$270 12-month target (~15x CY28 EPS of \$17.76). In our view, key risks include regulatory scrutiny across the EU, U.S., and UK, potential community backlash from open-source developers, and the challenge of maintaining platform-neutral credibility under NVDA ownership. Still, we expect NVDA to pour significant resources into Hugging Face to help drive AI adoption and the open-source platform. / Angelo Zino, CFA

August 27, 2026

01:07 AM ET... CFRA Maintains Strong Buy Opinion on Shares of NVIDIA Corporation [NVDA 209.66*****]:

We keep our 12-month target at \$270, on P/E of about 15x our CY 28 EPS. We lift our FY 27 (Jan.) EPS to \$9.23 from \$9.00, FY 28 to \$15.69 from \$12.95, and FY 29 to \$17.76 from \$16.29. We come away from its Jul-Q earnings call more optimistic about the near-term growth trajectory, with sales for FY 28 guided at +70% [well above our mid-40s outlook], led by both hyperscalers [\$1.3T spend by Big 5 in CY 27 vs. \$800B in CY 26] and emerging neoclouds/sovereign AI/enterprise spend [+134%]. Content growth for Vera Rubin is trending ahead of our view [\$42B per gigawatt vs. \$25B for Grace Blackwell] while standalone CPU demand is poised to accelerate. We applaud NVDA being upfront on gross margins pressures [compressing into Jan-Q but stabilizing to 72%-73% in CY 27 as price hikes start offsetting rising costs]. We think NVDA is helping build the AI ecosystem through innovative financing structure [e.g., NeoCloud revenue sharing], but circular funding remains a concern while visibility in CY 28 and beyond remains low. / Angelo Zino, CFA

August 26, 2026

04:59 PM ET... NVDA: Beat and Raise; Margin Guide A Slight Blemish [NVDA 213.05*****]:

NVDA posted Jul-Q revenue of \$96.2B [+106% Y/Y, +18% Q/Q], beating the \$92B forecast, with Non-GAAP EPS of \$2.22 [+120% Y/Y] significantly exceeding consensus of \$2.09. Data Center revenue reached a record \$89B (+117% Y/Y), representing ~92.5% of total revenue, driven by continued Blackwell Ultra ramp, with ACIE growing +138% Y/Y to \$40.3B and Hyperscale +102% Y/Y to \$48.7B. We believe the broadening demand from AI-native companies, enterprises, and sovereign customers signals constructive diversification beyond top hyperscalers. For Oct-Q, NVDA guides revenue of \$108B ±2%, beating \$104.6B consensus, though gross margins are guided at 74% ±50 bps, down from 75%. Notable off-balance-sheet exposure includes \$108.5B in guarantee commitments. We view the Oct-Q guidance, combined with the Vera Rubin full production ramp and ACIE acceleration, as supporting our thesis that NVDA is entering a new phase of platform-driven growth, despite initial ramp costs pressuring near-term margins. / Angelo Zino, CFA

August 21, 2026

04:18 PM ET... NVDA: Preview Ahead of Jul-Q Results; All About Vera Rubin [NVDA 215.46*****]:

NVDA is expected to report Jul-Q results on August 26, and we expect a revenue beat vs. consensus at \$92B [+95% Y/Y; 13% seq.]. The Data Center segment is forecast to exceed \$85B [+80% Y/Y], driven by supply-constrained demand and sustained hyperscaler spending, with ACIE revenue projected to grow +140% and Hyperscale +80%. Additional tailwinds include networking revenue more than doubling, an emerging Vera CPU opportunity targeting ~\$20B in FY 27 standalone revenue within a \$200B TAM, and Edge Computing momentum as Physical AI and agentic inference workloads proliferate. We expect NVDA to guide Oct-Q revenues of \$102B-\$110B, biased toward the higher end, which should satisfy elevated market expectations of \$104B. We view Oct-Q as a critical inflection point when initial Vera Rubin platform revenues begin, enabling NVDA to outpace customer capex growth. We raise FY 27 EPS to \$9.00 from \$8.90 and FY 28's to \$12.95 from \$11.95; FY 29

is set at \$16.29. We hold our 12-month target of \$270, based on ~17x CY 28 EPS. / Angelo Zino, CFA

August 11, 2026

07:43 AM ET... NVDA: Strategic Partnerships Carry Both Good And Bad Implications [NVDA 219.95*****]:

NVDA announces partnerships with six financial institutions — Apollo, BlackRock, Blackstone, Brookfield, Goldman, and KKR — targeting over \$500B in third-party capital to finance AI infrastructure buildout. The MOUs aim to create dedicated pools of capital at attractive rates for NVIDIA customers — including frontier AI labs, enterprises, sovereign AI programs, and cloud providers — to help them finance AI factories. We believe this initiative is intended to help ease financing bottlenecks [takes pressure off of NVDA to backstop more deals] while also deepening ecosystem lock-in for NVDA [developers stay on the platform]. We think this initiative specifically empowers/benefits non-hyperscalers [e.g., neoclouds], strengthening NVDA's position and helps further diversify the customer base [hyperscalers designing more in-house, posing a risk to NVDA]. Still, we also grow more wary as depreciation/collateral risks increase, as new server generations emerge and risk of supply catch-up rise from easing bottlenecks. / Angelo Zino, CFA

August 05, 2026

11:08 AM ET... CFRA Maintains Strong Buy on NVIDIA - Thoughts Around Musk Comments [NVDA 221.26*****]:

Elon Musk posted on X yesterday afternoon [August 4] that "SpaceX has committed to using Nvidia GPUs exclusively because they are the best," a notable endorsement given Musk's prior claims in June 2026 that he was building a chip "two to three times better than NVIDIA" at 10% of the cost. The reversal signals that, for mission-critical applications such as SpaceX, NVDA's ecosystem remains best in class. The commentary from Musk matches our assessment. In addition, we believe it makes sense for Musk to more closely tether himself to NVDA, as SpaceX may need to look for financial assistance in the future to build out its AI infrastructure and NVDA can definitely help in that area. As we look ahead to July results later this month, we think another "beat and raise" quarter should be in the cards as all signs point to a strong ramp of its Vera Rubin offering that will persist well into CY 2027. We maintain our 12-month target price at \$270 and Strong Buy view, as we view NVDA's risk/reward as highly compelling. / Angelo Zino, CFA

July 10, 2026

01:27 AM ET... NVDA: China Market Could Be Opening Up; Execution Risk Tied to Rubin Ultra [NVDA 202.78*****]:

Earlier this week, semiconductor research firm SemiAnalysis reported that the Kyber NVL144 rack system, NVDA's next-generation AI server platform, would be delayed by over 12 months to 2028 [currently pegged for 2H 2027], citing manufacturing challenges with a PCB orthogonal midplane. NVDA denied the report, asserting its product roadmap remains on schedule, but we do acknowledge high execution risk to the Rubin Ultra launch next year given it is a major architectural shift across the rack. Also this week, The Information cited that China will approve very limited H200 chip purchases for top AI firms including ByteDance and Alibaba, cracking open a potentially \$50B+ addressable market. Trading at less than 13x on a calendar 2028 basis, we think NVDA's risk/reward remains favorable, especially given upside potential to near-term estimates from the Vera Rubin platform while acknowledging bottlenecks and other risks to product execution/order ramp, as we maintain our \$270 target. / Angelo Zino, CFA

Forecasts are not reliable indicator of future performance.
Note: A company's earnings outlook plays a major part in any investment decision. S&P Global Market Intelligence organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years, as well as how those earnings estimates have changed over time. Note that the information provided in relation to consensus estimates is not intended to predict actual results and should not be taken as a reliable indicator of future performance.
Note: For all tables, graphs and charts in this report that do not cite any reference or source, the source is S&P Global Market Intelligence.

NVIDIA Corporation

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs [American Depositary Receipts], and ADSs [American Depositary Shares] based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS [Stock Appreciation Ranking System], equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark [e.g., a regional index [MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index]], based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

[also known as **S&P Capital IQ Earnings & Dividend Rankings**] - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsule the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+ Highest	B Below Average
A High	B- Lower
A Above	C Lowest
B+ Average	D In Reorganization
NC Not Ranked	

EPS Estimates

CFRA's earnings per share [EPS] estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus [average] EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Abbreviations Used in Equity Research Reports

CAGR - Compound Annual Growth Rate
 CAPEX - Capital Expenditures
 CY - Calendar Year
 DCF - Discounted Cash Flow
 DDM - Dividend Discount Model
 EBIT - Earnings Before Interest and Taxes
 EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
 EPS - Earnings Per Share
 EV - Enterprise Value
 FCF - Free Cash Flow
 FFO - Funds From Operations
 FY - Fiscal Year
 P/E - Price/Earnings
 P/NAV - Price to Net Asset Value
 PEG Ratio - P/E-to-Growth Ratio
 PV - Present Value
 R&D - Research & Development
 ROCE - Return on Capital Employed
 ROE Return on Equity
 ROI - Return on Investment
 ROIC - Return on Invested Capital
 ROA - Return on Assets
 SG&A - Selling, General & Administrative Expenses
 SOTP - Sum-of-The-Parts
 WACC - Weighted Average Cost of Capital

Dividends on American Depositary Receipts (ADRs) and American Depositary Shares (ADSs) are net of taxes [paid in the country of origin].

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ 5-STARS (Strong Buy):

Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★★ 4-STARS (Buy):

Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 3-STARS (Hold):

Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★★★★ 2-STARS (Sell):

Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 1-STAR (Strong Sell):

Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

NVIDIA Corporation

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five (six) model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports [collectively, the "Research Reports"] reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.

STARS Stock Reports:

Global STARS Distribution as of June 30, 2026
