Analysis prepared by Sel Hardy on Jul 15, 2026 11:43 AM ET, when the stock traded at USD 254.68.

Highlights

- JNJ delivered better-than-expected Q2 2026 results with sales of \$25.31B [+6.6% Y/Y], above consensus. Innovative Medicine posted \$16.4B [+7.8% Y/Y], driven by Oncology at \$7.4B [+17.3% Y/Y]. The key drug DARZALEX maintained strong momentum with \$4.2B [+18.9% Y/Y], tracking above \$16.8B annualized sales. TREMFYA emerged as standout with \$2.05B in Q2 sales [+72.5% Y/Y], accelerating from \$1.6B in Q1 and now tracking above \$7B in annualized revenue. The MedTech segment delivered \$8.9B [+4.5% Y/Y], though Abiomed declined -2.0%.
- Gross margin improved to 68.2% from 67.9%, reflecting favorable product mix from higher-margin products. SG&A increased to 25.4% from 24.8% due to higher commercial investments. JNJ commenced supply chain restructuring with estimated costs of \$650M-\$750M through 2029.
- JNJ raised its 2026 guidance to \$101.1B sales [+7.3% Y/Y] and adjusted EPS of \$11.68 [+8.2% Y/Y]. The Immunology franchise transition with TREMFYA growth and ICOTYDE ramp [\$104M vs. \$8M prior year] could offset STELARA/ REMICADE headwinds within 1-2 years, in our view. Orthopaedics separation [mid-2027] should enable focus on higher-growth MedTech areas.

Investment Rationale/Risk

- We maintain our Buy rating after Q2 results. The Immunology transformation, led by TREMFYA's exceptional growth and new indications, positions JNJ to offset STELARA/REMICADE headwinds. Innovative Medicine offers promising outlook with strong prospects for DARZALEX, ERLEADA, SPRAVATO, plus newer launches CARVYKTI, TECVAYLI, TALVEY. Strategic Orthopaedics separation will enable focus on higher-growth areas, in our view. Trump Administration drug pricing agreement provided tariff exemptions.
- Risks include faster-than-expected demand erosion for key drugs, potential new tariffs triggering supply chain disruptions, heightened legal risks from unsettled talc allegations, and pipeline failures. Abiomed's -2.0% decline warrants monitoring given its role as key MedTech growth driver, particularly as Orthopaedics separation increases Cardiovascular's relative weight.
- We raised our target price to \$290 from \$278 [July 15], representing 22.8x our 2027 EPS estimate, above historical forward P/E average, justified by improving growth outlook. We expect 2026 revenue of \$101.3B [+7.6%] led by both segments. JNJ offers reasonable entry point approaching first \$100B+ revenue year, supported by strong balance sheet.

Analyst's Risk Assessment

LOW	MEDIUM	HIGH
-----	--------	------

Our risk assessment reflects the benefits to JNJ of its earnings, which are diversified across many product categories, as well as its products, which are largely immune to economic cycles. In our view, JNJ holds a competitive advantage with health care provider customers, resulting from its diverse product mix and large scale. These strengths are balanced by the unpredictable nature of R&D pipelines and drug patent challenges, as well as by the potential for adverse legal rulings. The rising scrutiny on high drug costs in the U.S. also poses the threat of new regulations on drug prices or patent protection.

Johnson & Johnson

Business Summary Jul 15, 2026

Corporate Overview. Johnson & Johnson (JNJ) is one of the largest health care companies in the world by sales, spanning pharmaceuticals and medical devices.

The core Innovative Medicine segment [64% of JNJ’s 2025 sales, \$60.4B] develops and markets a wide range of synthetic and biologic drugs. JNJ’s most important therapeutic areas in Pharma are Immunology drugs that treat autoimmune diseases like Crohn’s Disease, psoriasis, and arthritis; Oncology drugs that treat tumors and other forms of cancer; Neuroscience drugs for disorders like depression or schizophrenia; Infectious Disease drugs for Covid-19 or HIV, for example; Cardiovascular/Metabolism drugs that can treat high blood pressure or prevent blood clots and strokes; and Pulmonary hypertension drugs.

Pharmaceutical products are complex and difficult to develop, often consuming several years and billions of investment dollars only to be found ineffective in late-stage human trials or failing to pass regulatory approval hurdles. When this occurs, JNJ can take large write-downs on in-process R&D assets. Despite these failure risks, JNJ spends considerably on R&D [\$14.B in 2025], and most of its M&A spending goes toward acquiring companies with promising pipeline drugs. Frequent reinvestment in new drugs is needed to keep the pipeline full of potentially marketable drugs that can eventually replace existing drugs, which over time, lose market share to competing treatments or become obsolete due to new ones.

We think the uncertainty involved with the development and marketing success of pharmaceuticals is the largest risk to JNJ’s earnings. Not only are billions of R&D investment dollars at risk of never producing profitable drugs, but competing versions of drugs or successful patent challenges in court from competitors can cut short a successful drug’s profitable lifespan. One recent example is JNJ’s best-selling drug, Remicade, a biologic drug for the treatment of immune-mediated inflammatory diseases that began losing sales due to a biosimilar [akin to a generic but for biologic drugs] approved in 2016. Another of JNJ’s top-selling drugs, Zytiga, held patents initially valid until 2027. But after a lengthy court battle, several generic competitors won the right to market a generic form of Zytiga beginning in late 2018.

The MedTech segment [36% of 2025 sales, \$33.8B] sells a wide range of health care products, including wound care, surgical instruments and implants, hip and knee replacements, and spinal implants. Like Pharmaceuticals, this segment is also dependent on R&D investment to develop innovative new medical products.

Corporate Strategy. Despite its industry-leading scale, JNJ is highly innovative and seeks to maintain leadership positions by aggressively funding new product development. Although internal growth is a key objective, JNJ has also pursued strategic acquisitions. The largest acquisition in JNJ’s history was Actelion Pharmaceuticals, acquired in 2017 for \$30B. JNJ retained Actelion’s marketed drugs, mainly to treat hypertension and late-stage compounds, but divested its discovery stage operations in a spin-off.

JNJ shared its outlook through 2030 in December 2023, outlining ambitious goals with its enterprise sales CAGR of 5%-7% Y/Y for 2025-2030 and above-expectation growth for its two businesses. JNJ expects Innovative Medicine sales to grow at a 5%-7% CAGR from 2025 to 2030 due to market growth and innovations. MedTech operational sales are expected to grow at a CAGR of 5%-7% from 2022 to 2027, mainly through geographic expansion, while it expects one-third of sales to come from new products in 2027.

Legal Issues. JNJ faces allegations regarding its role in the asbestos findings in baby talc powder and various other lawsuits. In May 2024, JNJ announced a new plan via its subsidiary to resolve 99.75% of all pending lawsuits related to the potential claims associated with ovarian cancer from cosmetic talc litigation. However, in a surprising and disappointing announcement for JNJ, a judge in Texas on March 31, 2025 dismissed JNJ’s latest attempt to settle the ovarian cancer claims from the talc litigation via a proposed prepackaged bankruptcy. As a result, JNJ will not appeal the decision but rather continue litigating in the tort system, where the company expects a successful outcome. JNJ will also be reversing the \$7B of the reserve it committed for the bankruptcy plan. Initially, JNJ committed nearly \$6.5B to the plaintiffs, but increased the settlement to \$8B. About 83% of claimants approved the plan during the three-month solicitation period.

Impact of Major Developments. JNJ decided in October 2025 to separate the Orthopedics business into a separate entity, which bodes well with its strategy of portfolio optimization. With the move, we think JNJ should be able to better focus on the higher growth areas of its MedTech segment, such as cardiovascular, surgery, and vision. We think Orthopedics is a promising market, and JNJ estimates it at \$50B in size. The separation is expected to be completed mid-2027.

On June 8, 2026, JNJ announced the acquisition of Firefly Bio for \$1B to gain access to its proprietary Firelink degrader antibody conjugate platform, which delivers selective protein degraders to tumor cells. The acquisition is expected to close in Q3.

Drug Pricing Negotiations. In August, the CMS released the results of the initial drug pricing negotiations. The announced prices will take effect in 2026. JNJ had the most drugs on the list with: [1] Xarelto, co-developed with Bayer; [2] Imbruvica, co-developed with ABBV; and [3] Stelara. The discount on the negotiated price from the list price ranges from 38% to 79% [62% for Xarelto, 38% for Imbruvica, and 66% for Stelara].

Financial Trends. Sales rose to \$94.2B in 2025 from \$88.8B in 2024. Full-year 2025 adjusted EPS of \$10.79 vs. \$9.98 in 2024 rose by 8.1% Y/Y. We expect dividend appreciation to continue in line with previous years, barring any major M&A that temporarily shelves dividend expansion.

Johnson & Johnson

Sub-Industry Outlook

Our 12-month outlook for the pharmaceuticals sub-industry is neutral. We see several long-term tailwinds fueling the sub-industry's growth, such as continued innovation to discover and develop breakthrough therapies, an aging population, and rising life expectancy driving strong demand for drugs and treatments, balanced by a number of near-term risks such as loss of exclusivities and intensifying competition. While we continue to see policy risks in the near term, we believe the worst-case scenarios are unlikely to happen after major pharmaceutical companies reached agreements with the U.S. government on tariffs.

Yet, multiple blockbuster drugs face loss of exclusivity (LOE) through 2030, with generic and biosimilar competition accelerating. Several blockbuster drugs face LOEs in 2026, such as Pomalyst by BMY; Opsumit and Simponi by JNJ; and Januvia/Janumet by MRK. Pfizer faces approximately \$14B to \$15B in LOE impact through 2028 on its major products. We think patent cliff concerns have been guiding companies' strategic moves as firms have been aggressively pursuing M&A to replenish their drug portfolios in recent years.

Amid tensions in the Middle East and tariff concerns, pharmaceuticals remain a defensive sector, in our view. We think the demand for essential drugs, particularly in the fields of oncology, immunology, diabetes, and mental health, will remain strong. We also expect the trend of aging populations to continue to support the demand for prescription drugs in the long run, especially in key therapeutic areas. While we expect oncology to retain its dominant market share in terms of global spending in the next few years, we expect obesity to continue its strong growth trajectory and be the fastest growing therapy area.

Obesity treatment represents one of the most compelling growth opportunities in biopharma today, accelerated by breakthrough GLP-1 therapies and increasing obesity rates. In the near term, we see the duopoly between Eli Lilly and Novo Nordisk continuing, while we expect

competition between the two to intensify this year.

The Inflation Reduction Act (IRA) allows Medicare to negotiate prices for the costliest drugs covered in Parts B and D. The first drug pricing negotiations for the 10 top-selling prescription drugs in 2024 included products from large U.S. pharmaceuticals [BMY, PFE, LLY, MRK, and JNJ] with discounts ranging from 38% to 79%. In 2025, the next 15 drugs subject to negotiations included drugs from U.S. firms such as BMY, PFE, and MRK with discounts ranging from 38% to 85%. 2026 marks the first year in which the first round of negotiated prices take effect, representing a structural shift in U.S. drug pricing. We think the IRA may have important implications; if firms know new blockbusters may get negotiated down, they may price them higher at launch. The act may also impact where and how firms decide to invest.

AI has the potential to transform the sub-industry, reducing costs and improving savings in the long run, in our view. The use of AI is accelerating drug development, optimizing manufacturing, and personalizing treatments. We think the use of AI could result in increased productivity, creating favorable margin evolution.

As of May 8, 2026, the S&P Composite 1500 Pharmaceuticals Index [-2.4% YTD] outperformed the S&P Composite 1500 Health Care Index [-6.7% YTD] but underperformed the S&P Composite 1500 [+8.4%] YTD.

*For Peer Groups with more than 10 companies or stocks, selection of issues is based on market capitalization.
NA-Not Available; NM-Not Meaningful.
Note: Peers are selected based on Global Industry Classification Standards and market capitalization. The peer group list includes companies with similar characteristics, but may not include all the companies within the same industry and/or that engage in the same line of business.

Johnson & Johnson**Analyst Research Notes and other Company News****July 15, 2026**

11:43 AM ET... CFRA Keeps Buy Opinion on Shares of Johnson & Johnson [JNJ 254.68****]:

After Q2 results, we raise our target price to \$290 from \$278, 22.8x our 2027 EPS estimate, above JNJ's 10-year historical forward P/E average, justified by its improving growth outlook. We lift our 2026 adjusted EPS estimate to \$11.68 [from \$11.66] to reflect the raised guidance. We lift our 2027 EPS estimate to \$12.74 from \$12.58. At current trading levels, shares trade close to 20.0x our 2027 EPS estimate, offering what we view as a reasonable entry point for a company with sustainable revenue growth, on the cusp of its first \$100B+ revenue year. We also welcome the company's decision announced on June 8 to acquire Firefly Bio, Inc. for \$1B to gain access to its proprietary Firelink degrader antibody conjugate [DAC] platform, which delivers selective protein degraders to tumor cells while sparing healthy cells. The acquisition, which is expected to close in Q3, targets KRAS-driven cancers – historically considered “undruggable” – and could strengthen JNJ's oncology pipeline for hard-to-treat solid tumors. / Sel Hardy

July 15, 2026

07:53 AM ET... JNJ Q2: Solid Performance Fueled by Innovative Medicine, Raises 2026 Guidance [JNJ 253.85****]:

JNJ delivered solid Q2 results with worldwide sales of \$25.31B [+6.6% Y/Y], beating consensus estimate of \$25.06B, while adjusted EPS of \$2.90 [+4.7% Y/Y] exceeded consensus of \$2.85 but was broadly in line with our forecast of \$2.91. Innovative Medicine sales drove growth at +7.8% Y/Y to \$16.4B, led by Oncology's +17.3% Y/Y expansion, while MedTech contributed \$8.9B [+4.5% Y/Y] with broad-based growth across platforms. The key myeloma drug Darzalex maintained exceptional momentum with \$4.2B in sales [+18.9% Y/Y], reinforcing our view of peak sales above \$20B by 2028, while TREMFYA accelerated significantly to \$2.05B [+72.5% Y/Y]. JNJ raised full-year 2026 guidance to sales of \$101.1B [+7.3% Y/Y] and adjusted EPS of \$11.68 [+8.2% Y/Y], increases of \$300M and \$0.13, respectively, from April guidance. We believe the strong oncology franchise performance, particularly Darzalex's trajectory toward a \$16.8B annualized run-rate, supports our positive outlook for JNJ's transformation into a higher-growth enterprise. / Sel Hardy

June 22, 2026

10:01 AM ET... CFRA Adds Shares of Johnson & Johnson to the Total Return Portfolio [JNJ 228.39****]:

We add shares of Johnson&Johnson [JNJ] to the Total Return portfolio, replacing Amgen [AMGN]. We think JNJ's Innovative Medicine segment continues to offer a promising long-term outlook, despite near-term challenges. This is due to the strong prospects for existing, key drugs, such as Darzalex, Erleada, and Spravato, plus three new recent launches [Carvykti, Tecvayli, and Talvey]. While we expect ongoing sales erosion in Stelara to accelerate due to biosimilar entry in the U.S., solid growth in key pharma products and tuck-in M&A could help counterbalance this. We think the MedTech segment maintains consistent growth momentum: sales of \$8.6B in Q1 grew by 7.7% Y/Y, led by strong Cardiovascular sales of \$2.4B [+13.0% Y/Y]. We welcome JNJ's decision to separate the Orthopedics business into a separate entity, which bodes well for portfolio optimization. With the move, JNJ should better focus on higher growth areas such as cardiovascular, surgery, and vision. The separation is expected to be completed mid-2027. / Sel Hardy

April 14, 2026

10:34 AM ET... CFRA Retains Buy Opinion on Shares of Johnson & Johnson [JNJ 238.60****]:

We keep our target of \$278, 22.1x our 2027 EPS view, above JNJ's 10-year historical forward P/E average, justified by its improving growth outlook. We lift our 2026 EPS view to \$11.66 from \$11.63, mainly to reflect the Q1 beat. We keep our 2027 EPS at \$12.58. JNJ delivered solid Q1 2026 results that were above expectations, with top-line sales growth of 9.9% Y/Y to \$24.1B, demonstrating continued momentum across both the core Innovative Medicine [+11.2% Y/Y] and MedTech [+7.7% Y/Y] segments. The company reaffirmed its trajectory toward \$101B in annual revenue for 2026 [CFRA: \$101.3B] and expressed confidence in achieving double-digit growth by decade's end. We view this target as achievable driven by new product launches [Darzalex injectable, Icotyde, which is expected to be one of JNJ's largest products], an innovative pipeline, and key strategic initiatives [mid-2027 Orthopedics separation, which we think will unlock considerable value for JNJ and manufacturing expansions in North Carolina and Pennsylvania]. / Sel Hardy

April 14, 2026

07:28 AM ET... JNJ Q1 Results Beat Expectations, Raises 2026 Outlook [JNJ 238.46****]:

JNJ delivered solid Q1 2026 results with sales growth of 9.9% Y/Y to \$24.1B, beating expectations. Adjusted EPS of \$2.70 declined from \$2.77 prior year but exceeded consensus estimate of \$2.68. Strong oncology execution drove Innovative Medicine growth of 11.2% Y/Y to \$15.4B, with key Oncology drugs, DARZALEX achieving \$4.0B [+22.5% Y/Y] and CARVYKTI reaching \$597M [+62.1% Y/Y], helping offset STELARA erosion [\$656M, -59.7% Y/Y], as biosimilar competition intensified. Management raised the 2026 guidance to \$100.8B sales and \$11.55 adjusted EPS, reflecting confidence in the growth trajectory, in our view. We think JNJ's robust pipeline, including key Q1 approvals like ICOTYDE the first-line oral treatment for plaque psoriasis, positions the company well for its transformation into a higher-growth enterprise. With strong franchise execution and multiple growth drivers across oncology and MedTech, we believe JNJ can navigate near-term headwinds while delivering on its path to double-digit growth by decade-end. / Sel Hardy

March 13, 2026

01:29 PM ET... CFRA Raises Rating on Shares of Johnson Johnson to Buy from Hold [JNJ 243.56****]:

We raise our target to \$278 from \$225, 22.1x our 2027 EPS forecast, above JNJ's 10-year historical forward P/E average, justified by its improving growth outlook, in our view. We lift our 2026 EPS estimate to \$11.63 from \$11.56 and our 2027 EPS to \$12.58 from \$12.45. We view Pharmaceuticals as a classically defensive sector in times of economic disruption and slowdown [please see our report, “Health Care: Defensive Alternatives in a Volatile Energy Price Environment”] and think JNJ could be well positioned to attract investor interest in the current environment. J&J's transformation from a firm facing a major LOE into a streamlined, higher-growth enterprise is progressing ahead of our expectations. The MedTech turnaround, anchored by cardiovascular strength and the pending OTTAVA launch, positions JNJ well to achieve solid performance, in our view. With the Stelara LOE headwind behind and a robust pipeline ahead, we think J&J could offer an attractive combination of growth, stability, and returns. / Sel Hardy

January 21, 2026

12:31 PM ET... CFRA Retains Hold Opinion on Shares of Johnson & Johnson [JNJ 216.08****]:

We lift our 12-month target price to \$225 from \$222, 18.1x our new 2027 EPS forecast, above JNJ's 10-year historical forward P/E average. We raise our 2026 EPS estimate to \$11.56 from \$11.46 and initiate our 2027 EPS forecast at \$12.45. JNJ closed out 2025 with total sales of \$94.2B [+6.0% Y/Y], which was above expectations due to stronger-than-anticipated 2H performance. Innovative Medicine achieved \$60.4B in sales [+6.0% Y/Y] despite the Stelara headwind [-41.3% Y/Y], as the key immunology drug is facing intense biosimilar competition. MedTech delivered \$33.8B in sales [+6.1% Y/Y], with consistent growth across segments and particular strength in Cardiovascular sales [+15.8%] led by contributions from Abiomed and Shockwave. Following the solid rally seen in JNJ shares in Q4, we see limited upside potential at the current levels. We think developments regarding the separation of the Orthopedics business, which has a targeted completion date of late 2026 to early 2027, will be key to follow. / Sel Hardy

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs [American Depositary Receipts], and ADSs [American Depositary Shares] based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS [Stock Appreciation Ranking System], equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark [e.g., a regional index [MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index]], based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

[also known as **S&P Capital IQ Earnings & Dividend Rankings**] - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsule the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+ Highest	B Below Average
A High	B- Lower
A Above	C Lowest
B+ Average	D In Reorganization
NC Not Ranked	

EPS Estimates

CFRA's earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus [average] EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Abbreviations Used in Equity Research Reports

CAGR - Compound Annual Growth Rate
 CAPEX - Capital Expenditures
 CY - Calendar Year
 DCF - Discounted Cash Flow
 DDM - Dividend Discount Model
 EBIT - Earnings Before Interest and Taxes
 EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
 EPS - Earnings Per Share
 EV - Enterprise Value
 FCF - Free Cash Flow
 FFO - Funds From Operations
 FY - Fiscal Year
 P/E - Price/Earnings
 P/NAV - Price to Net Asset Value
 PEG Ratio - P/E-to-Growth Ratio
 PV - Present Value
 R&D - Research & Development
 ROCE - Return on Capital Employed
 ROE Return on Equity
 ROI - Return on Investment
 ROIC - Return on Invested Capital
 ROA - Return on Assets
 SG&A - Selling, General & Administrative Expenses
 SOTP - Sum-of-The-Parts
 WACC - Weighted Average Cost of Capital

Dividends on American Depositary Receipts (ADRs) and American Depositary Shares (ADSs) are net of taxes [paid in the country of origin].

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ 5-STARS (Strong Buy):

Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★★ 4-STARS (Buy):

Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 3-STARS (Hold):

Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★★★★ 2-STARS (Sell):

Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 1-STAR (Strong Sell):

Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

Johnson & Johnson

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five (six) model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports [collectively, the "Research Reports"] reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.
